

James Doe
Male DOB: 3/21/1932

Provide: Jane White MD
Location of Care:

Cardiology Office Visit Note

Patient Review

Date of service: 04/01/2016 1:16PM

This is the patients first outpatient encounter

Impression & Recommendations:

Problem # 1: CAD (ICD-414.00) (1C010-125. 10)

jaw pain with exertion, had negative cath in 2012 in the setting of chest and jaw pain
will get a stress test
cardiac meds

Problem # 2: ESSENTIAL HYPERTENSION (ICD-401.9) (1C010-110) elevated blood pressure today, he did not take his medicine yesterday or today, discussed the importance of compliance, | suspect his angina could be related to hypertension

Problem #3: HYPERCHOLESTEROLEMIA (ICD-272.0) (1CD10-E78.0) on high dose Crestor

Problem # 4: ATRIAL FIBRILLATION (ICD-427.31) | cannot find documentation of atrial fibrillation on any rhythm strip electrocardiogram. Continue aspirin. He could not tolerate beta blockers in the past. He will need anticoagulations he has evidence of atrial fibrillation.

James does not have a known history of diabetes. High blood pressures recorded. Patient is comfortable with treatments but interested in knowing more options

Patient Instructions:

- 1) Please schedule a follow-up appointment in 1 year.
- 2) please schedule a Lexiscan stress test
- 3) Please take blood pressure medications daily and check blood pressure at home

Current Problems

Jaw pain (ICD-784.92) (ICD10-R68.84)
